

Flow of the software product needed:

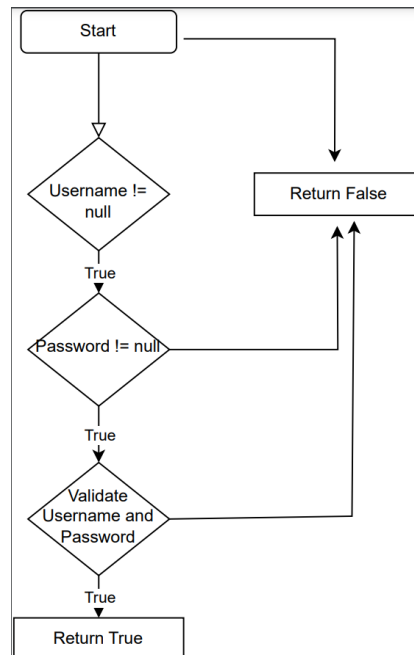

1. Login

1. Login button click validation

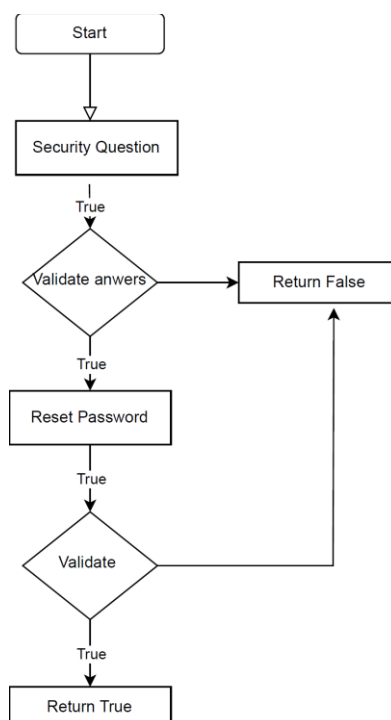

1. Username and password field not null

2. Username/Password correct

3. Ask for this custom feature - Can we store Password in 3-DES/SHA-1/SHA-256/AES-128/AES-256 encrypted format in the database so it will be safe from hacking.

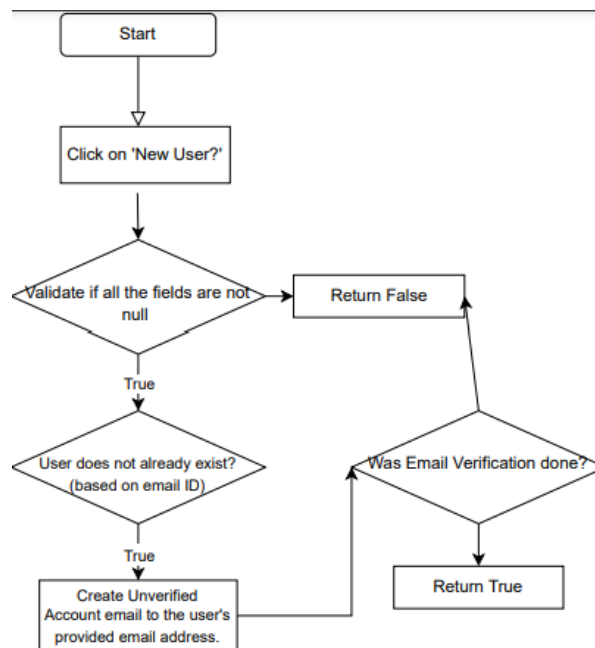

2. Forget password - send to another intent

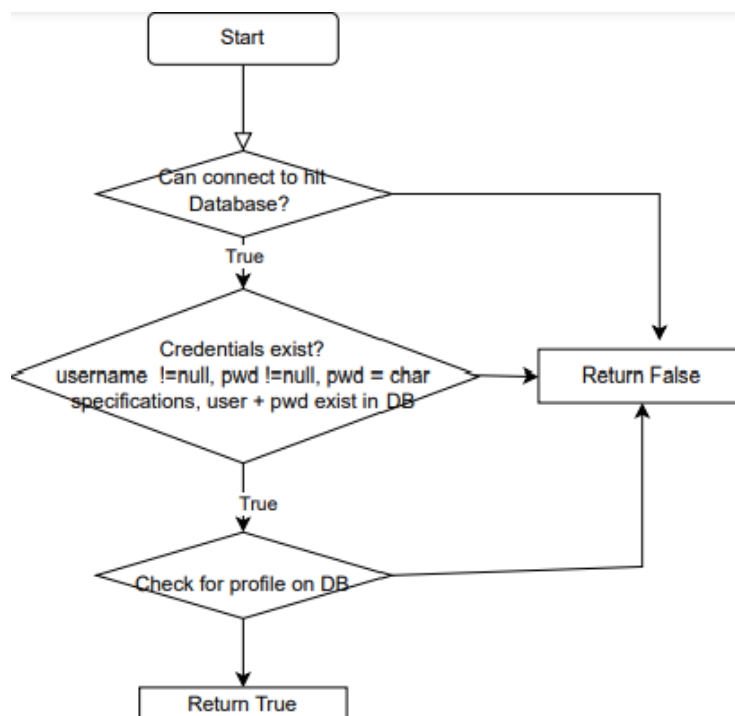

Validate above includes that the password should have the following: 1) at least one capital letter 2) at least at least one small letter 3) at least one special character 4) no other special character other @, .,: 5) than at least one number

3. New User? link to add

4. Login button click

1. Hit database (DAO design pattern)
2. Set the user to logged in (State Design Pattern)
3. Fetch profile of the user (Data Stream Basic implementation)
4. If no profile, set default and show profile screen for first time users
5. If profile, set the app as per the user preference

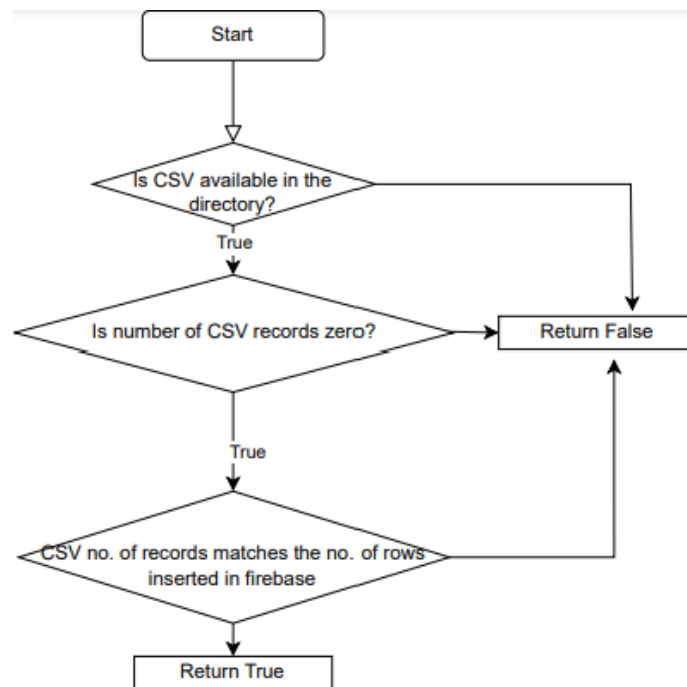

2. First page - can use the Android design template which has 3 tabs at the bottom

1. Tab 1: Show data

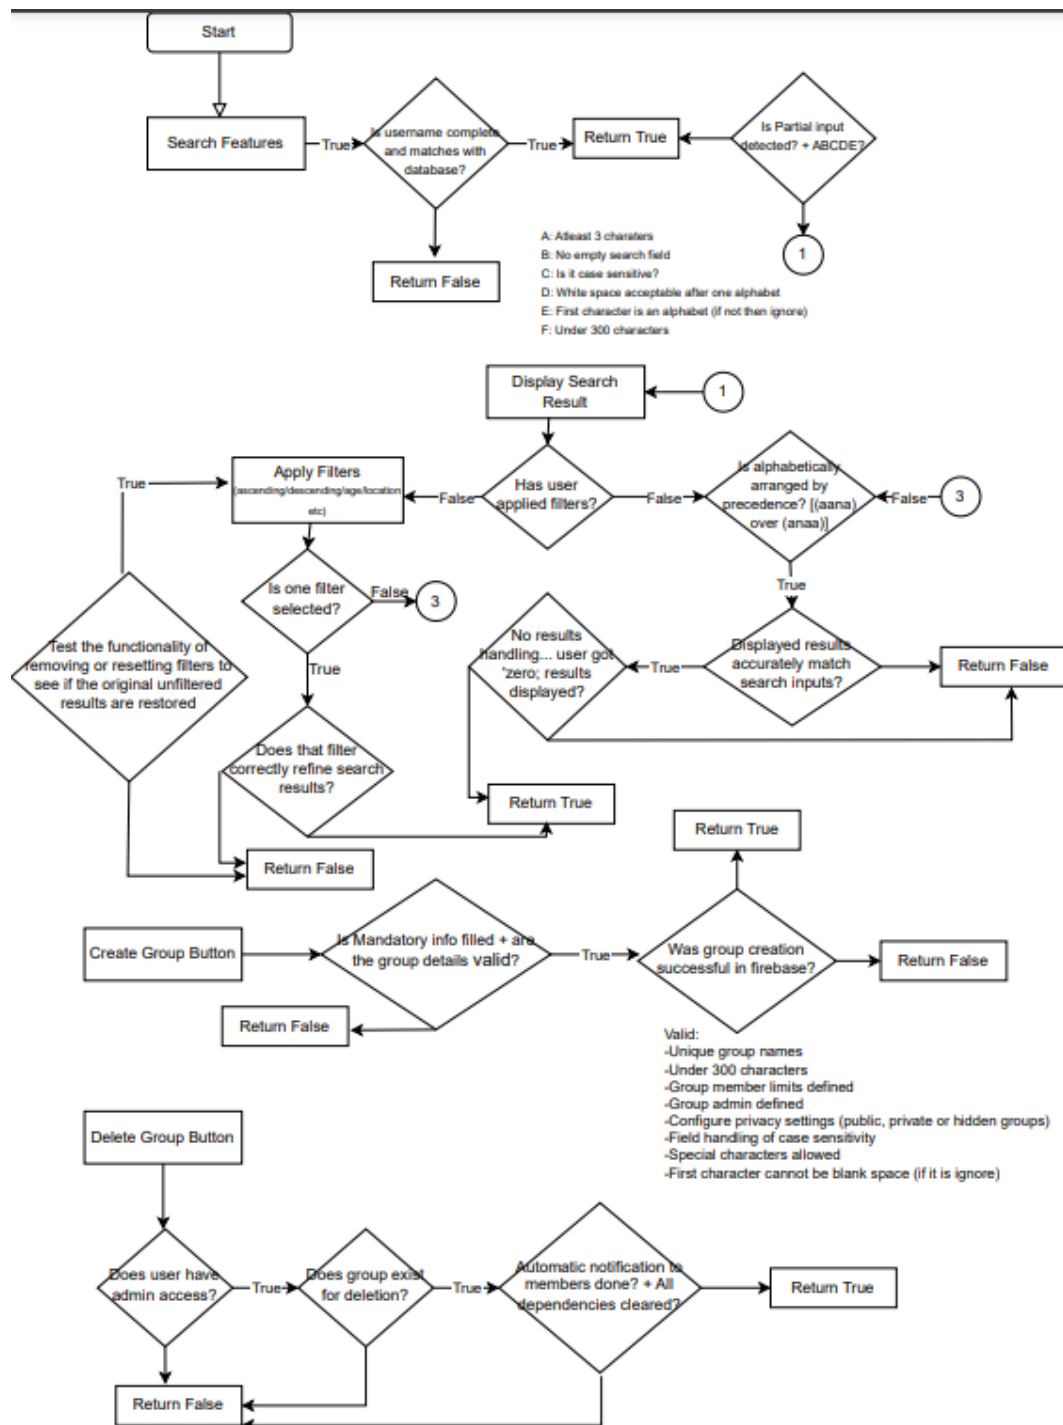

1. Create a page with stats (for starters - can change it later) (Load show data)

- a. In future, can convert it in graphical format.
2. Upload the CSV file in as and convert it to JSON. Then upload the JSON to firebase. (Custom feature - Data-Formats) (Tree implementation)
3. Can create a thread to execute download the file automatically, or refresh the data automatically.
4. If time permits - Download data in PDF/Excel/CSV format (Template Design Pattern)

2. Tab 2: Messaging

1. Search - Search for a person/group - add filter
2. Create/delete group button - adding/deleting the group to Firebase - Use trees data structure
3. Social gathering information - Google Map and use the device current location to calculate the distance.

3. Tab 3: User Profile (Store all these details in Firebase or in the mobile itself)

1. Theme of the app
2. Name of the person
3. DOB
4. Gender - Male/Female/Others(add textbox for them to specify.
5. Belonging to First Nation people - Yes/No
5. Profile Photo
6. Status/Caption
7. Allow notification - push up/SMS/Email (Template Design Pattern) (not now)
8. Contact info

9. Email

10. Request for Permission for camera, location, files and contacts on the device (not now)
